

# LIFELINE ROPES. 20 METERS

## Features:

- 12mmØ vertical lifeline ropes of 20 meters, with threaded steel carabiner and thimble.
- Twisted polyester rope to be used with WIND device.
- Minimum resistance 22KN

## Details/Application

- In work with vertical movements with risk of falling
- Holding the user at each point of the rope using the WIND sliding fall arrest device. Important note. Lifeline ropes are not considered an EPI in themselves and must always be used with sliding fall arrest devices according to EN353-2.
- They should therefore never be used directly on the harness, but rather using the sliding fall arrest device (WIND).

**Würth Art.No. 899032719**

Packaging	
Minimum units	1
Packaging units	5 per box
